

# CAR VENTILATION SYSTEM

A NEW PRODUCT FOR THE MANUFACTURERS OF AUTOMOTIVE ACCESSORIES

INVENTOR: MR. MICHAEL BIANCONE  
www.mbicu.com

## SALES POTENTIAL

The **CAR VENTILATION SYSTEM** fulfills a real need for millions worldwide. Once introduced, consumer and industry acceptance should be enthusiastic and immediate. Marketing will be easy, as it can be sold in discount, department, and automobile supply stores, as well as, in specialty outlets. In addition, it can be attractively offered in trade and industry catalogs, appropriate magazines, on home shopping networks, and over the Internet. It is an exciting, new innovation that opens up a new and highly profitable product line with unlimited national and international marketing opportunities.

## COMMENTARY

Simplicity and careful planning are used in its basic design. Because of this, the design is practical and consideration has been given to manufacturing technique. It is a product that offers unique possibilities and one that deserves serious consideration from manufacturers in this industry.

## FINANCIAL ARRANGEMENTS

The inventor has indicated a willingness to negotiate the financial arrangements.

## NOTE TO MANUFACTURERS

THANK YOU FOR YOUR TIME AND CONSIDERATION. THERE IS NO CHARGE FOR REQUESTING THE FOLIO.

## FOR FURTHER INFORMATION:

Please CALL 866-446-5096

We will then forward you a folio, which contains additional details including drawings and specifications.

**We are delighted to introduce for license or sale a new ventilation device for any vehicle.**

The invention, called the **CAR VENTILATION SYSTEM**, features a solar powered exhaust system for vehicle windows. The primary object of this invention is to provide a device that eliminates the excessive build up of heat inside of a parked vehicle. It will reduce the interior temperature allowing the driver to enter the vehicle in relative comfort. It will also reduce the amount of heat damage often caused to a vehicle's interior dash and seat coverings. This new system can be designed as original equipment on new cars or for an aftermarket product to those now existing. Using

this method, this unique system lends itself as a user-friendly product.

Inventor Michael Biancone was led to the development of his **CAR VENTILATION SYSTEM** after realizing

that there is nothing like this available on the market today. He has designed a remarkable cooling system that is durable, easy-to-use, and install by most mechanics. Operating this system is activated by solar power and the auxiliary battery power supply. Simply setting the thermostatic switch is all that is required by the user, the system will then keep the interior of the vehicle at the desired temperature without requiring the vehicle to be running or otherwise engaged. The exhaust fans will activate and force the hot air from the interior. Ultimately, it makes this invention a much sought-after product for anyone who has to deal with heat build up in a parked vehicle.

It is a truck device that can be manufactured in sizes, colors, and styles to fit any type of vehicle available on the market today. The design used is simple and uncomplicated, enabling it to be easily produced from a variety of appropriate materials at an affordable and competitive price. This superior **CAR VENTILATION SYSTEM** has been awarded a much-deserved United States Patent for its unique and exceptional design. This product is now ready for immediate introduction to a vast and waiting market.
